Kuglehane med slangeforskr.
1/2" - 3/4" Bib cock with
hose connector 1/2" - 3/4"

TEKNISKE EGENSKABER:

Temperatur grænser: for væsker -20°C til + 90°C

Tryk grænser: for væsker PN40

SPECIFIKKE KARAKTERISTIKA:

- VIVA kuglehane er et pålideligt og enkelt produkt
- Flowet er direkte, med begrænset tryktab. En flow filter er indbygget som standard.
- Kontrol af åben/lukket funktion ses tydeligt og umiddelbart, via håndtagets position.
- Enkel og let betjening.
- Den lange levetid, opnås ved hjælp af PTFE pakninger der beskytter kuglen.
- Selvrensende kugle system
- Anti Blow-Out spindel med 3 pakninger.

Applikationer:

VIVA serien er velegnet til distribution af varmt og koldt vand.

Gevind og tilslutninger:

Standard udvendig, i henhold til ISO 228/1

Betjening / håndtag:

Aluminium håndtag

Farve: Blå

TECHNICAL FEATURES:

Temperature limits: for fluids from -20°C to +90°C

Pressure limits: for fluids PN 40

SPECIFIC FEATURES:

- The VIVA valve is a product easy and reliable.
- The flow is direct, with limited head losses; a flow strainer is mounted as a standard feature.
- The check of open and closed position is immediate, through the lever position.
- Easy and rapid maneuver.
- The long endurance is guaranteed by wrapping PTFE seats mutually protecting the ball.
- Self cleaning ball system.
- Anti blow-Out stem with 3 seats.

Application fields:

VIVA series is suitable for the distribution of hot and cold water.

Threaded end connections:

Standard Male according to ISO 228/1.

Operation devices:

Aluminum lever

Available color: Blue

All the valves are tested 100% on pneumatic seal with electronic control.

TRYK/TEMPERATUR DIAGRAM - PRESSURE/TEMPERATURE DIAGRAM

I tilfælde af frost og isdannelse, anbefaler vi at installationen tømmes for vand, samt kuglehanen betjent flere gange for at sikre at hanen er fuldstændig tømt. Vi anbefaler at kuglehanen isoleres termisk, for at undgå denne frostrisiko.

In the event of freezing and ice, we recommend the installation must be drained and the valve operated several times to ensure that it is fully drained. We suggest that the valve be thermally insulated to avoid this risk.
